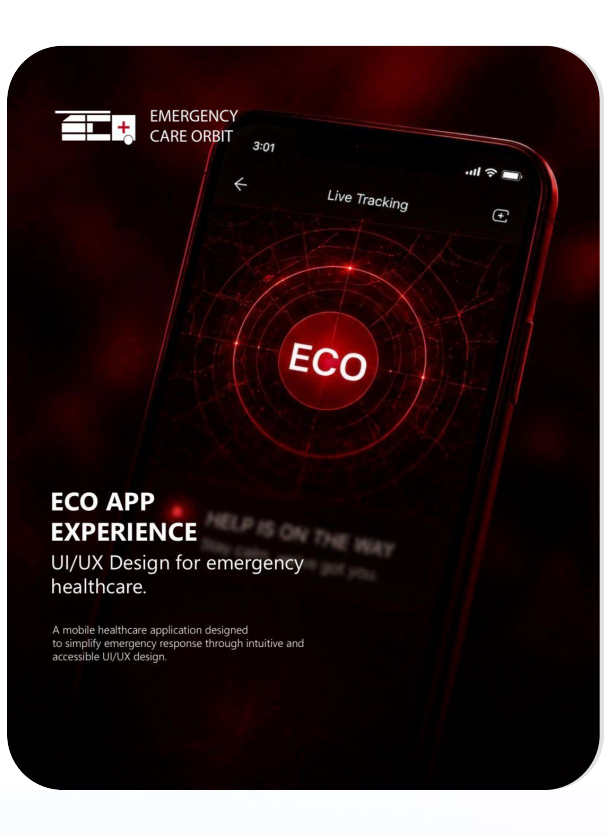
EMERGENCY CARE ORBIT

Research Paper & Abstract: Amphi Transport for Emergency Medical Services - An Initiative to Devise Multi Modeo Ambulance Operations

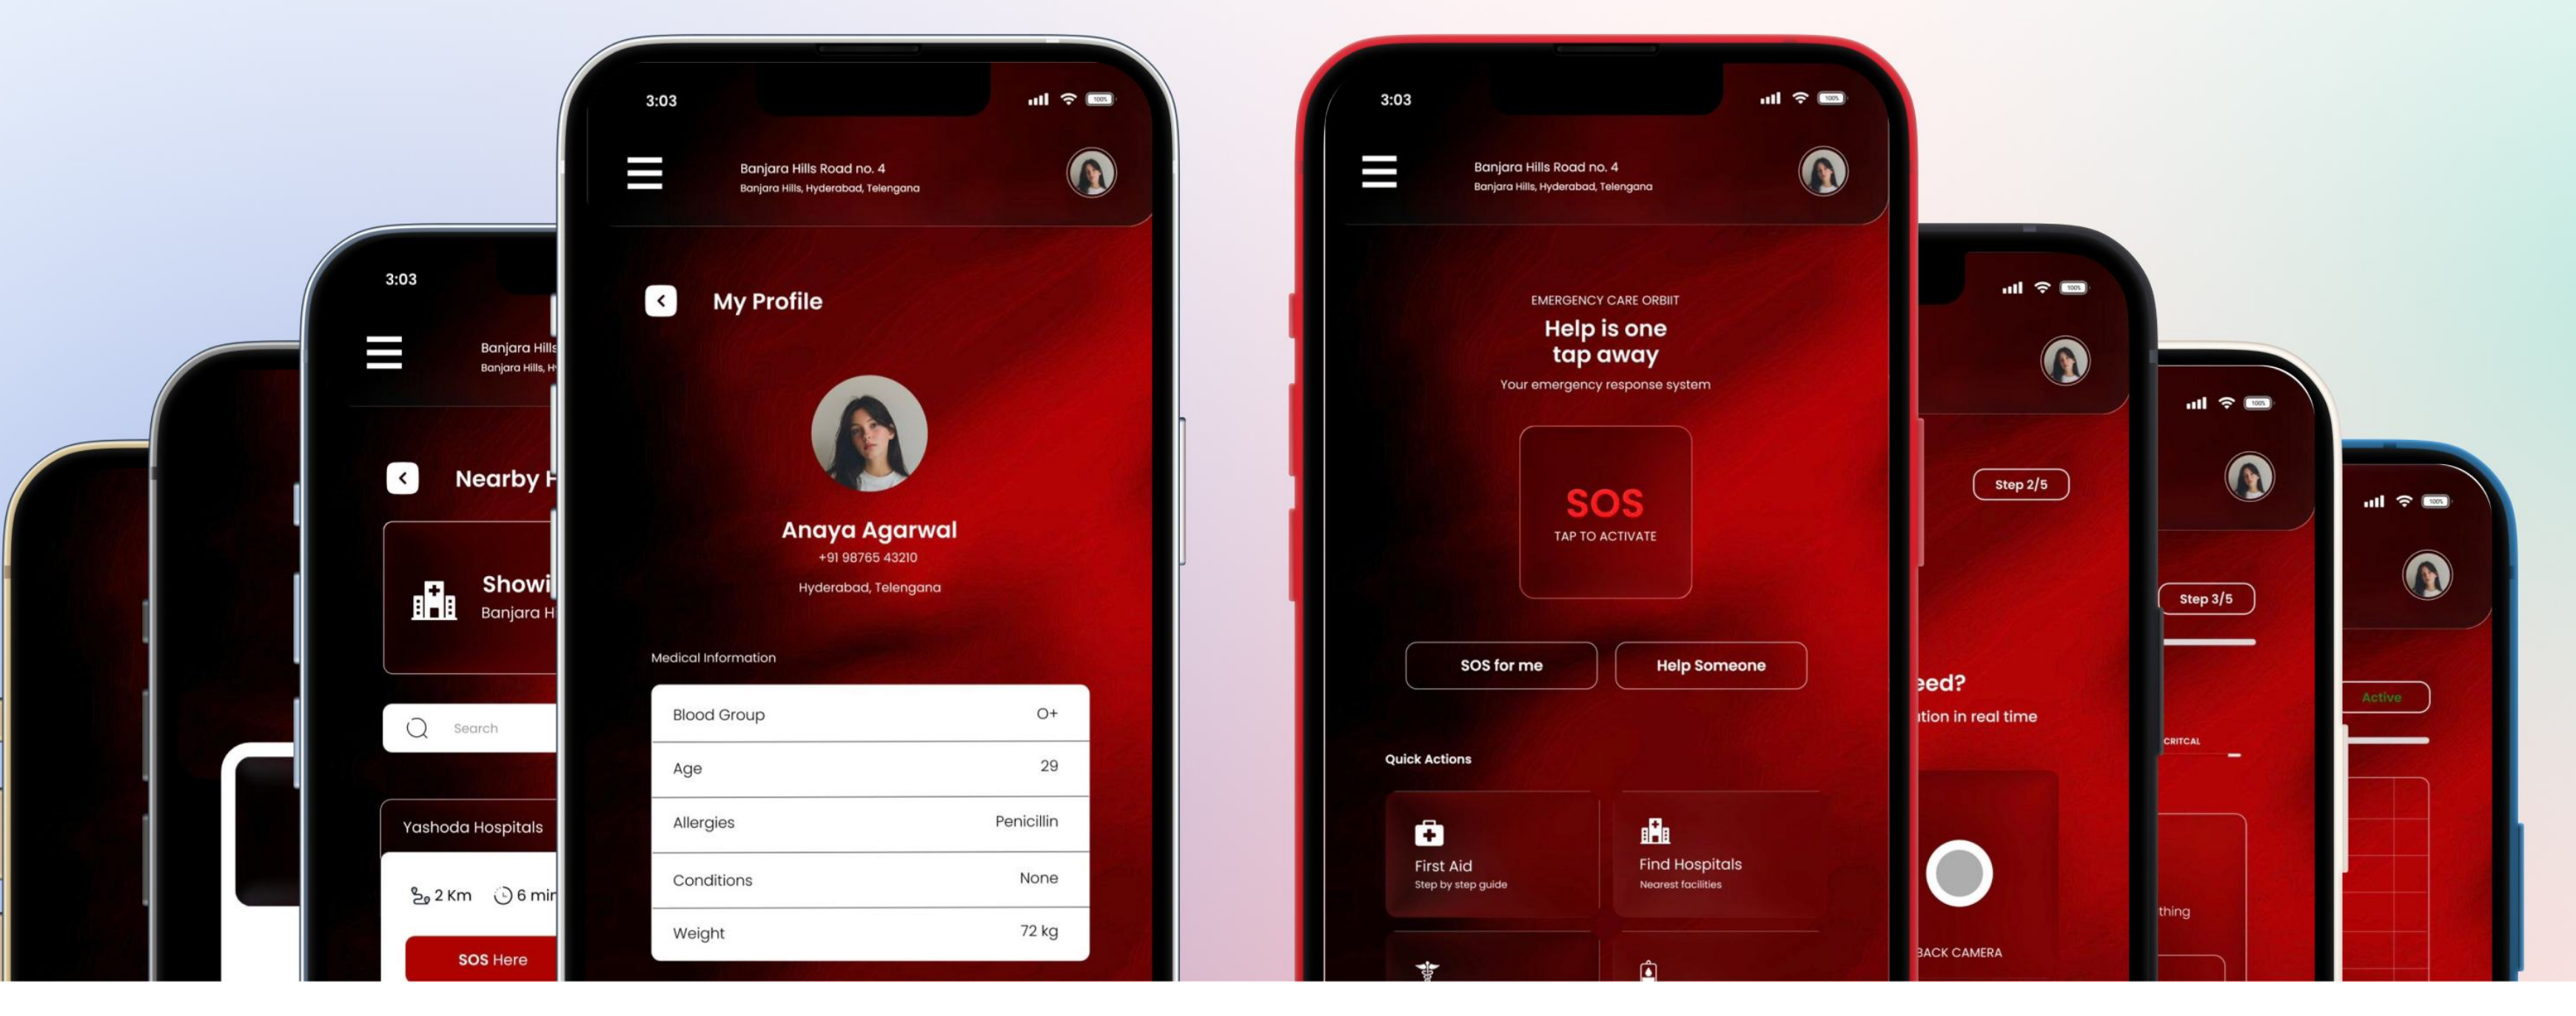
Submitted & Presented at IDEAS 2024, International Conference, IIT Roorkee



ECO EMERGENCY HEALTHCARE APP DESIGN

UI/UX DESIGN FOR EMERGENCY MEDICAL ACCESSIBILITY

A healthcare application concept designed to improve emergency accessibility, navigation, and response through intuitive digital experiences.



EMPOWERING EMERGENCY RESPONCE THROUGH DESIGN

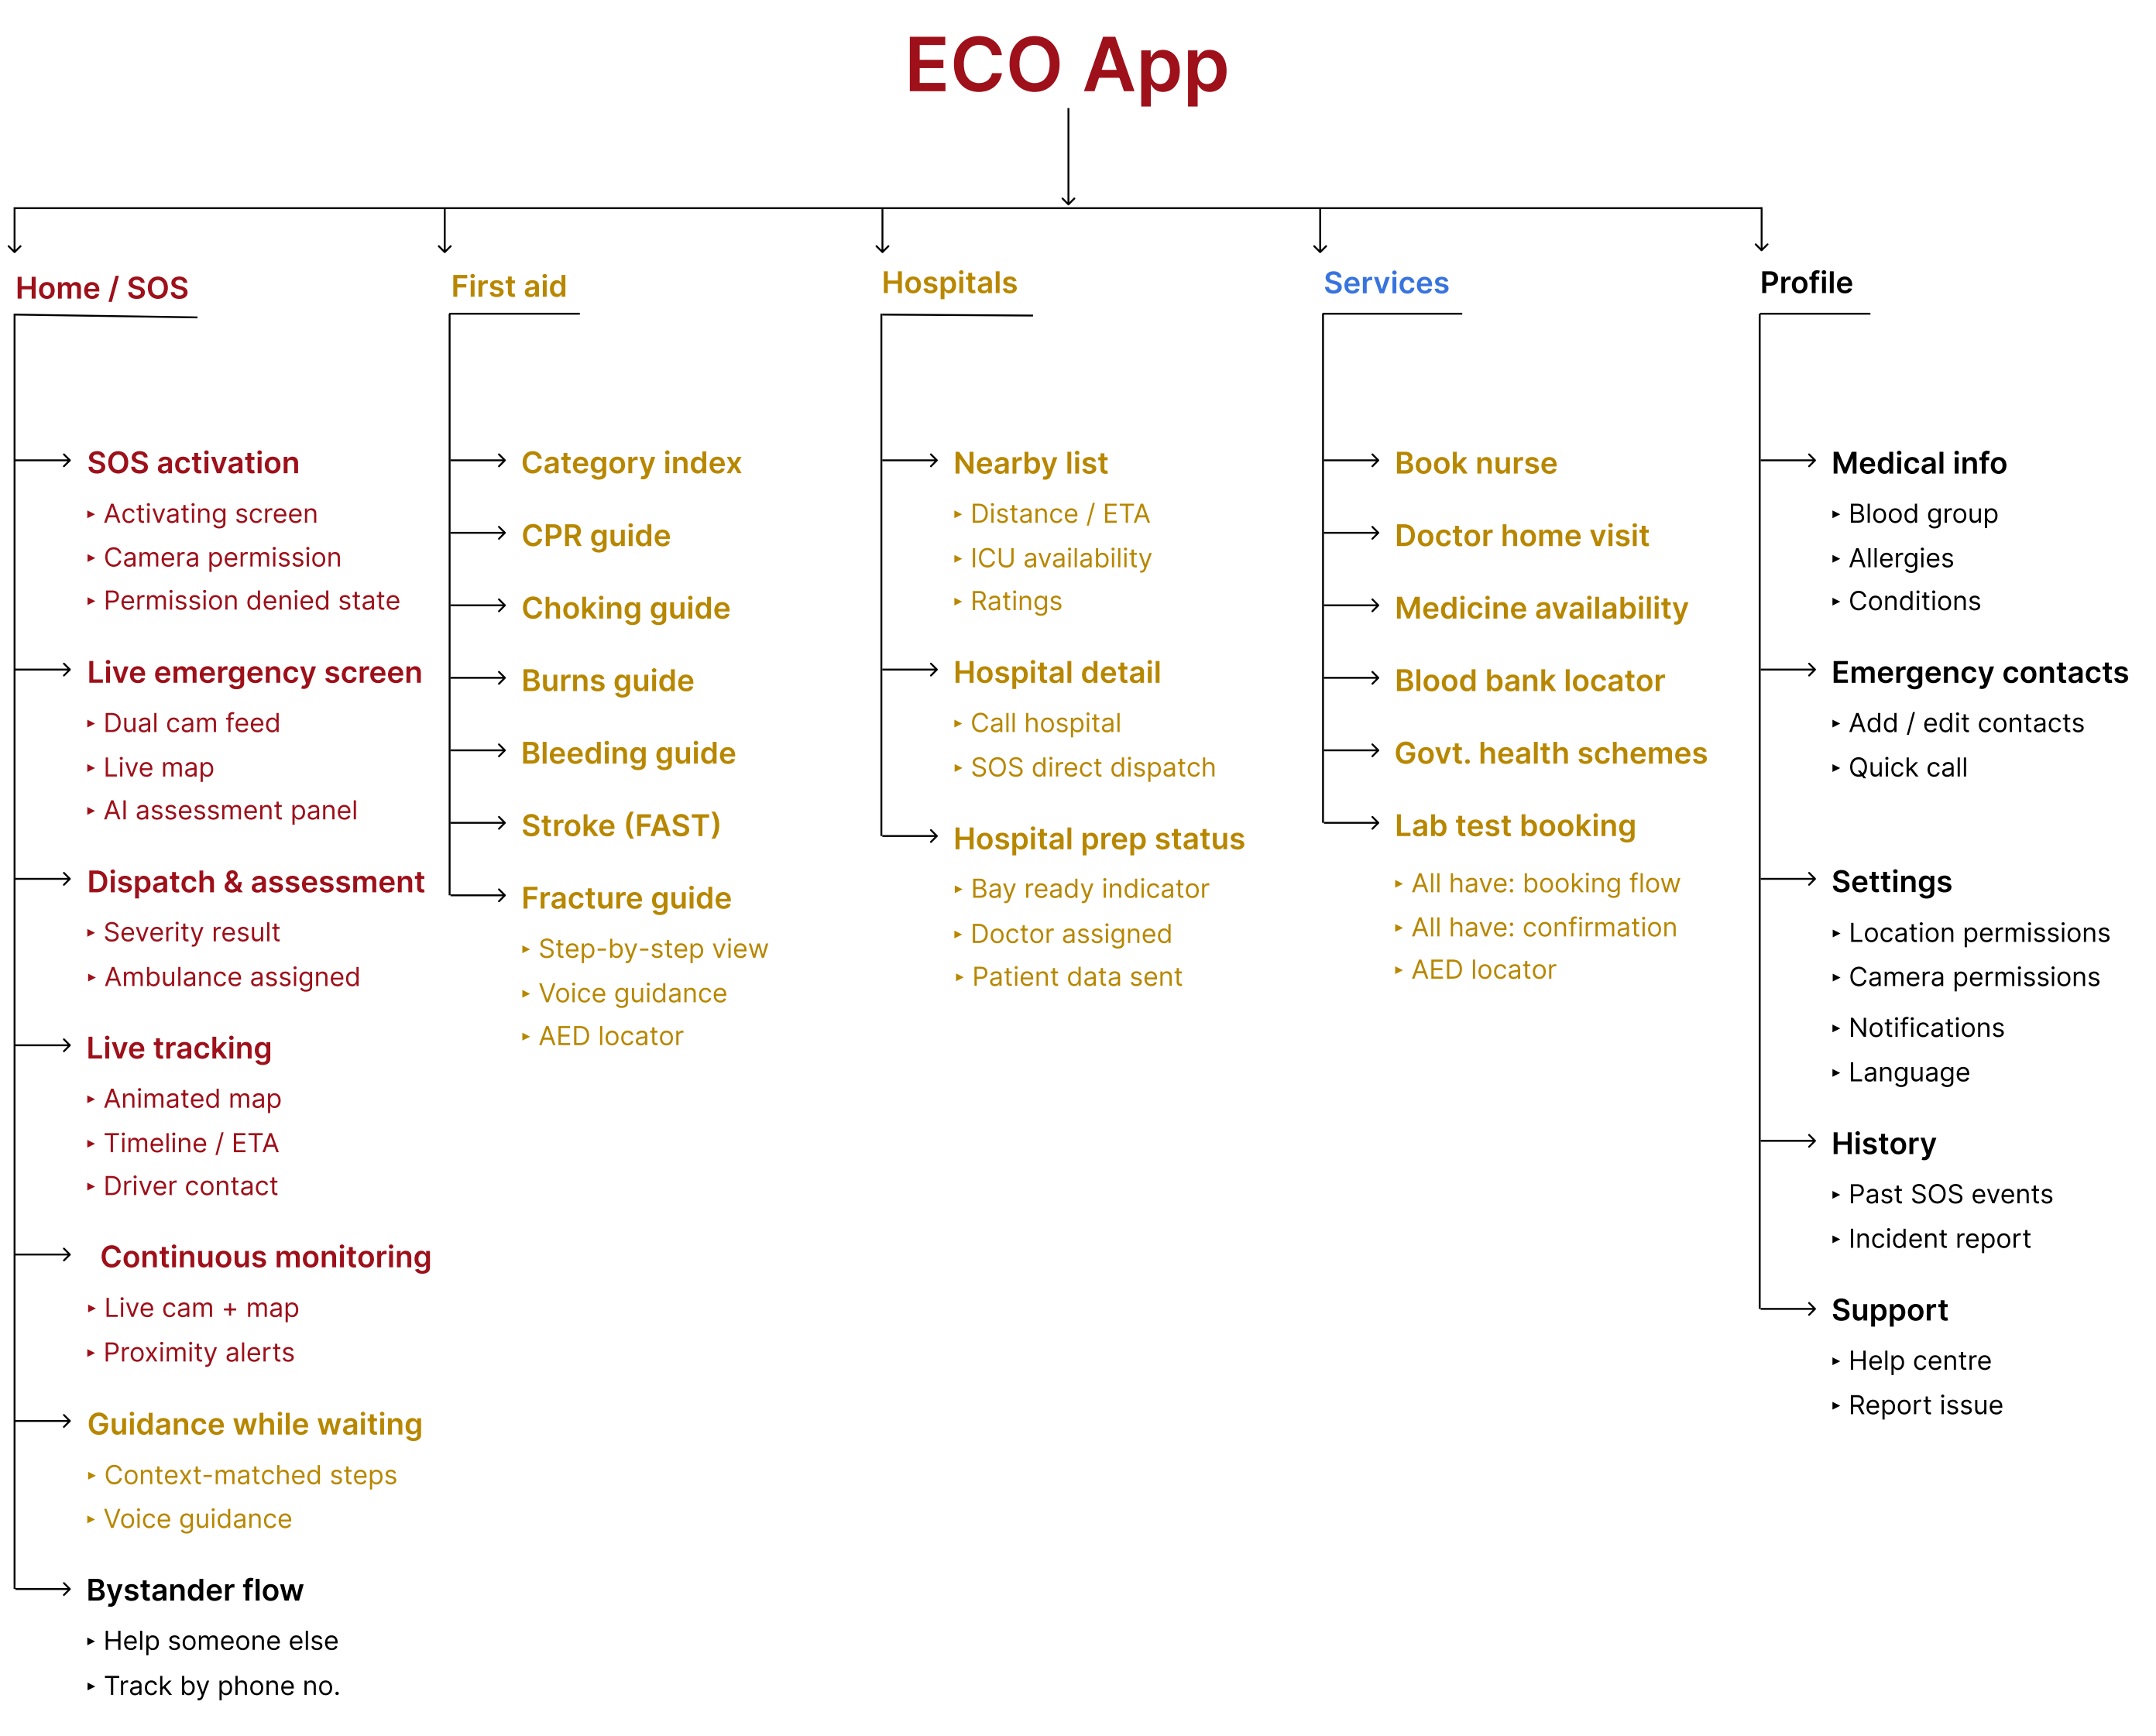
An immersive emergency care application focused on fast assistance, seamless navigation, and real-time support during critical situations.

Explore Projects

Emergency Care Orbit

This emergency response application is designed to provide users with immediate access to assistance during high-risk or critical situations through a fast, intuitive, and accessible digital experience. The app was developed to address the growing need for a reliable safety platform that minimizes response delays and improves communication during emergencies. With features such as SOS assistance, emergency contacts, live location tracking, and instant alerts, the interface focuses on enabling users to seek help quickly and efficiently. The visual language of the application is built around urgency and clarity, using bold red tones, high-contrast elements, and structured layouts to create a seamless navigation experience. Designed with usability at its core, the app aims to solve challenges related to delayed emergency response, lack of accessible support systems, and communication barriers by providing a secure and user-friendly emergency assistance platform.

Information Architecture



ECO App

Home / SOS
- SOS activation
  - Activating screen
  - Camera permission
  - Permission denied state
- Live emergency screen
  - Dual cam feed
  - Live map
  - AI assessment panel
- Dispatch & assessment
  - Severity result
  - Ambulance assigned
- Live tracking
  - Animated map
  - Timeline / ETA
  - Driver contact
- Continuous monitoring
  - Live cam + map
  - Proximity alerts
- Guidance while waiting
  - Context-matched steps
  - Voice guidance
- Bystander flow
  - Help someone else
  - Track by phone no.

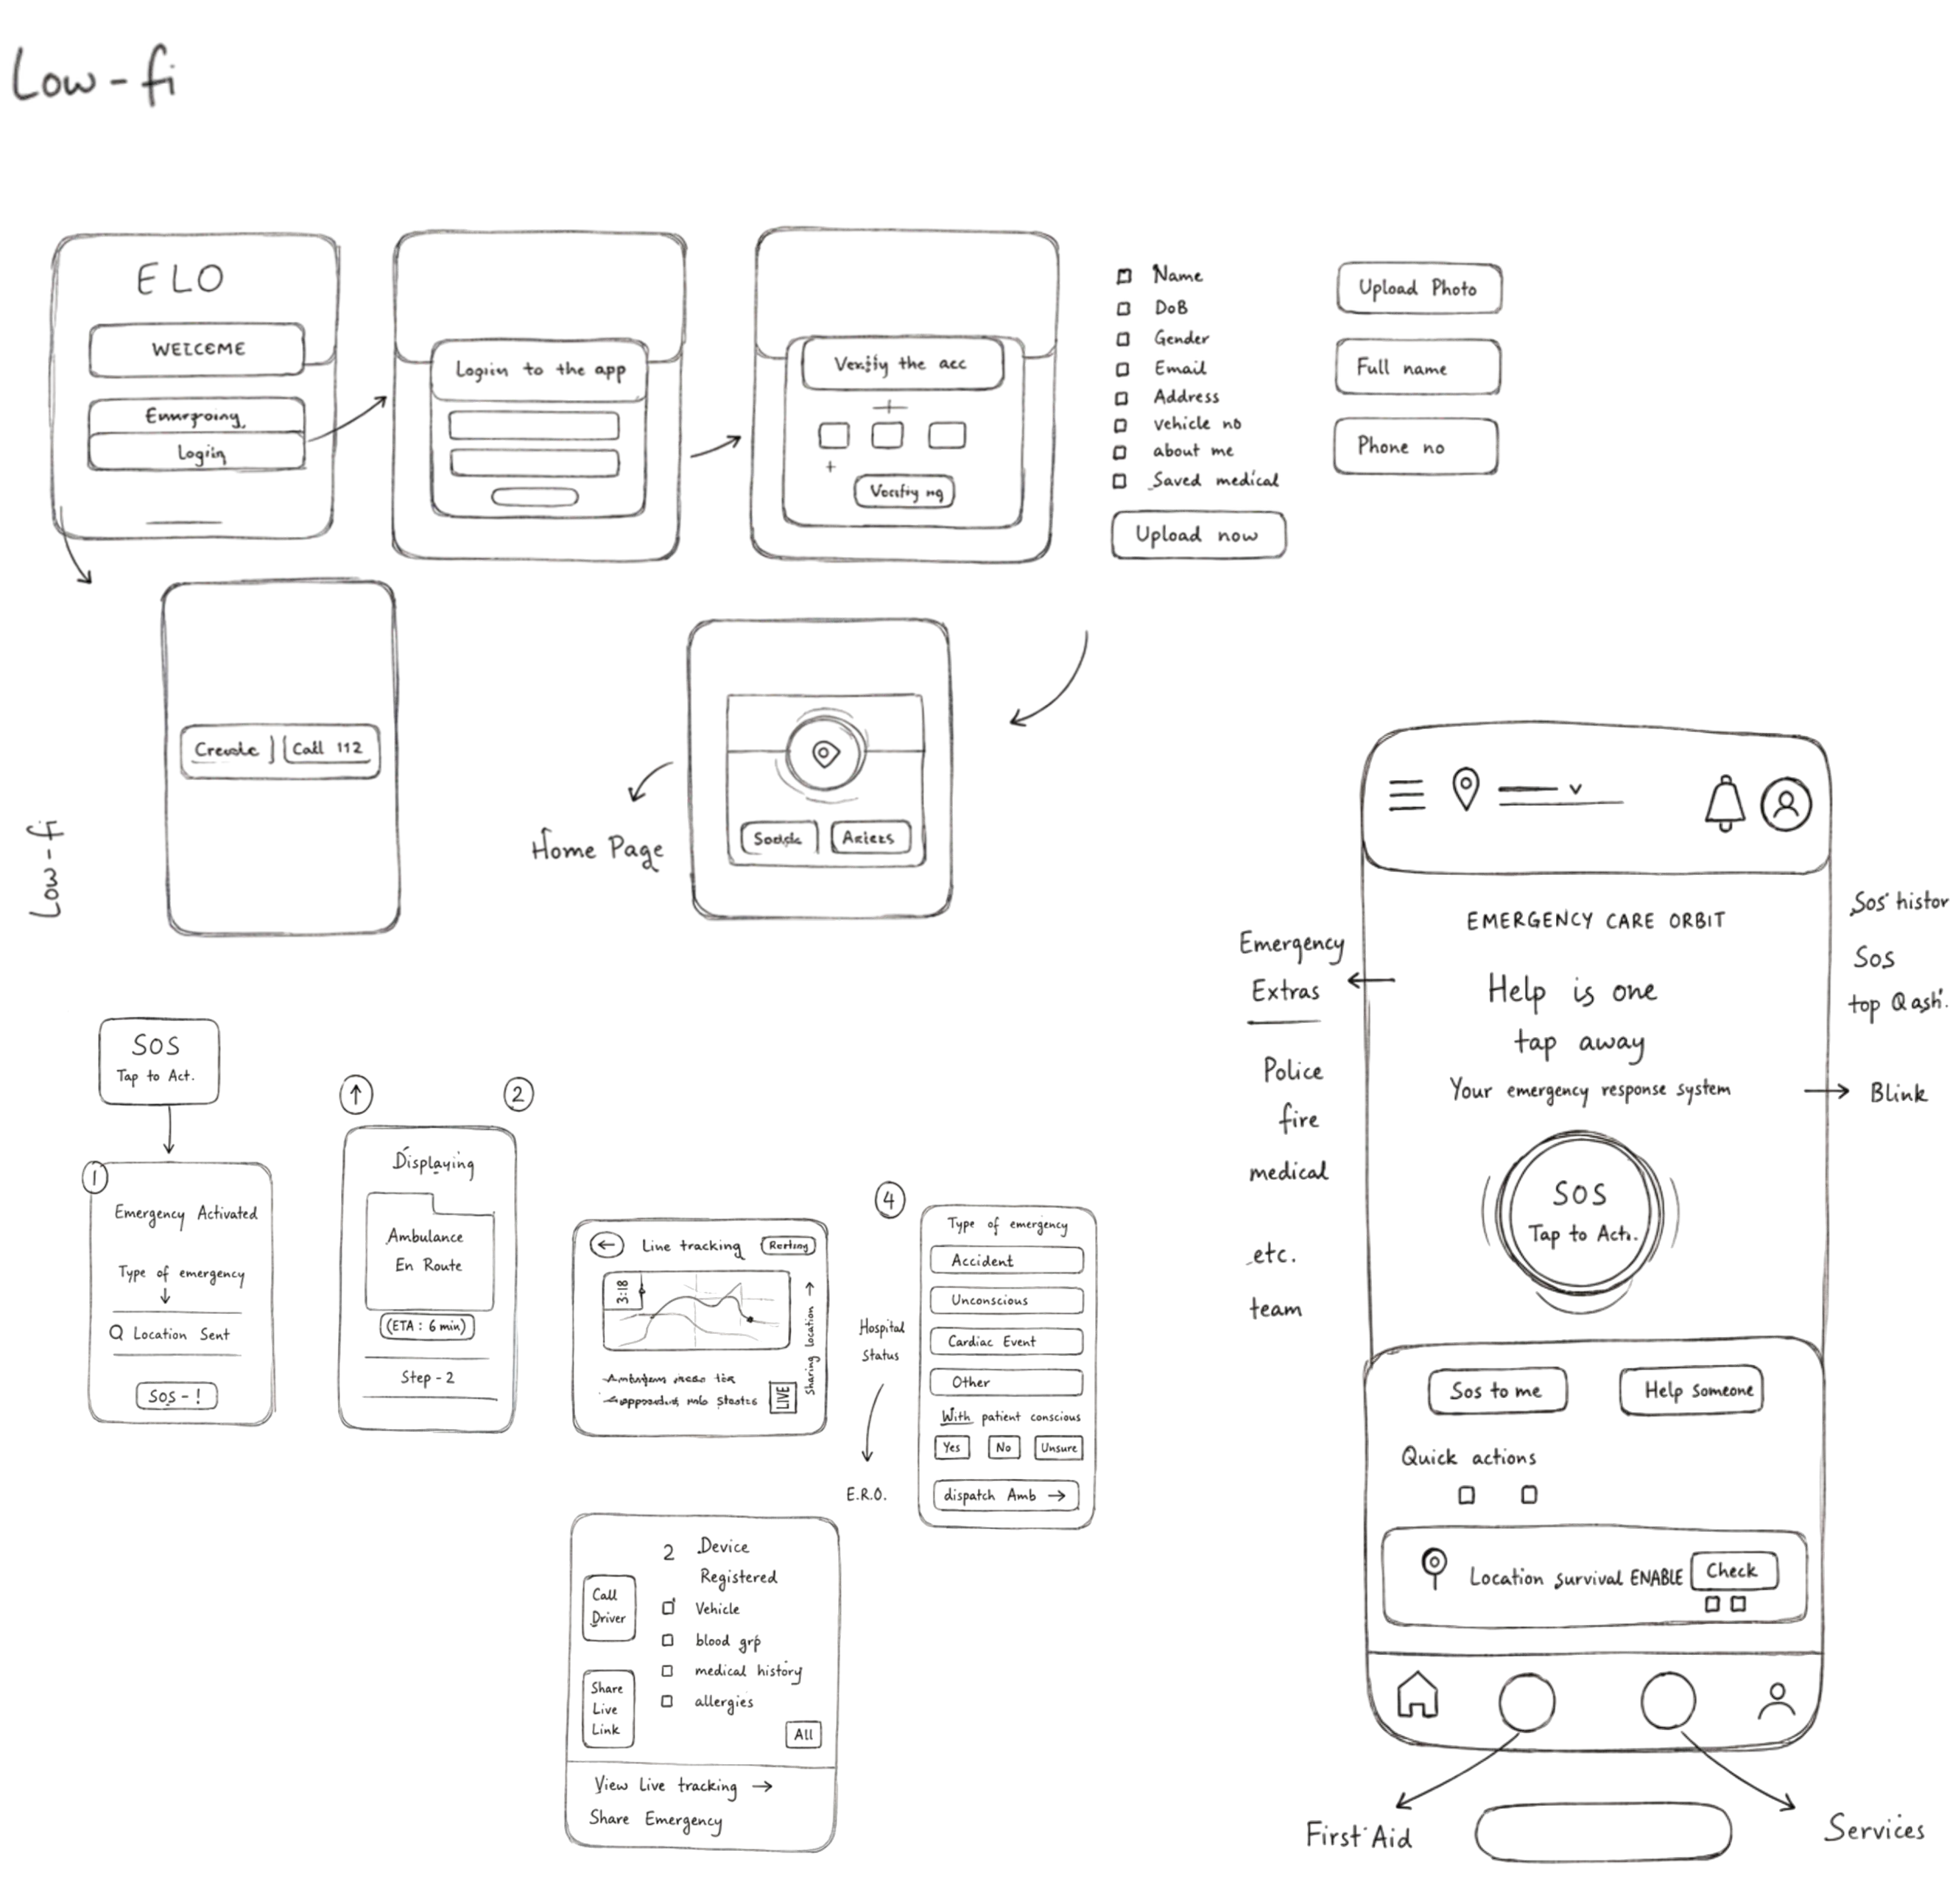
First aid
- Category index
- CPR guide
- Choking guide
- Burns guide
- Bleeding guide
- Stroke (FAST)
- Fracture guide
  - Step-by-step view
  - Voice guidance
  - AED locator

Hospitals
- Nearby list
  - Distance / ETA
  - ICU availability
  - Ratings
- Hospital detail
  - Call hospital
  - SOS direct dispatch
- Hospital prep status
  - Bay ready indicator
  - Doctor assigned
  - Patient data sent

Services
- Book nurse
- Doctor home visit
- Medicine availability
- Blood bank locator
- Govt. health schemes
- Lab test booking
  - All have: booking flow
  - All have: confirmation
  - AED locator

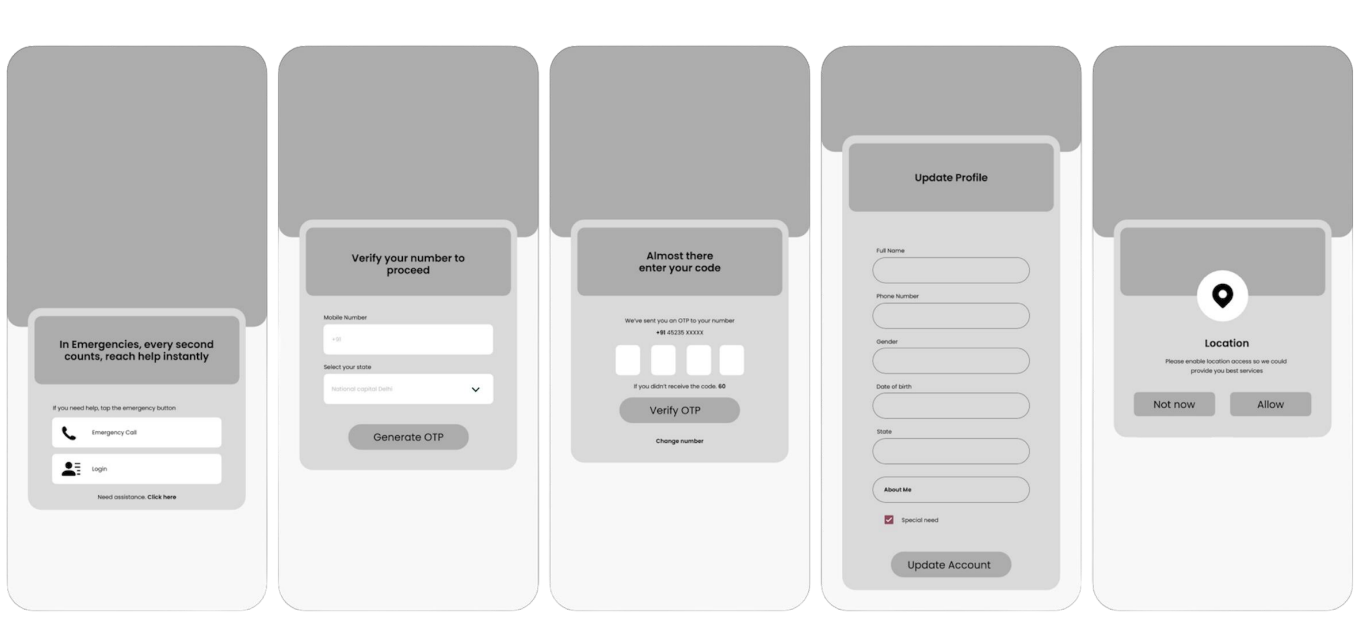
Profile
- Medical info
  - Blood group
  - Allergies
  - Conditions
- Emergency contacts
  - Add / edit contacts
  - Quick call
- Settings
  - Location permissions
  - Camera permissions
  - Notifications
  - Language
- History
  - Past SOS events
  - Incident report
- Support
  - Help centre
  - Report issue

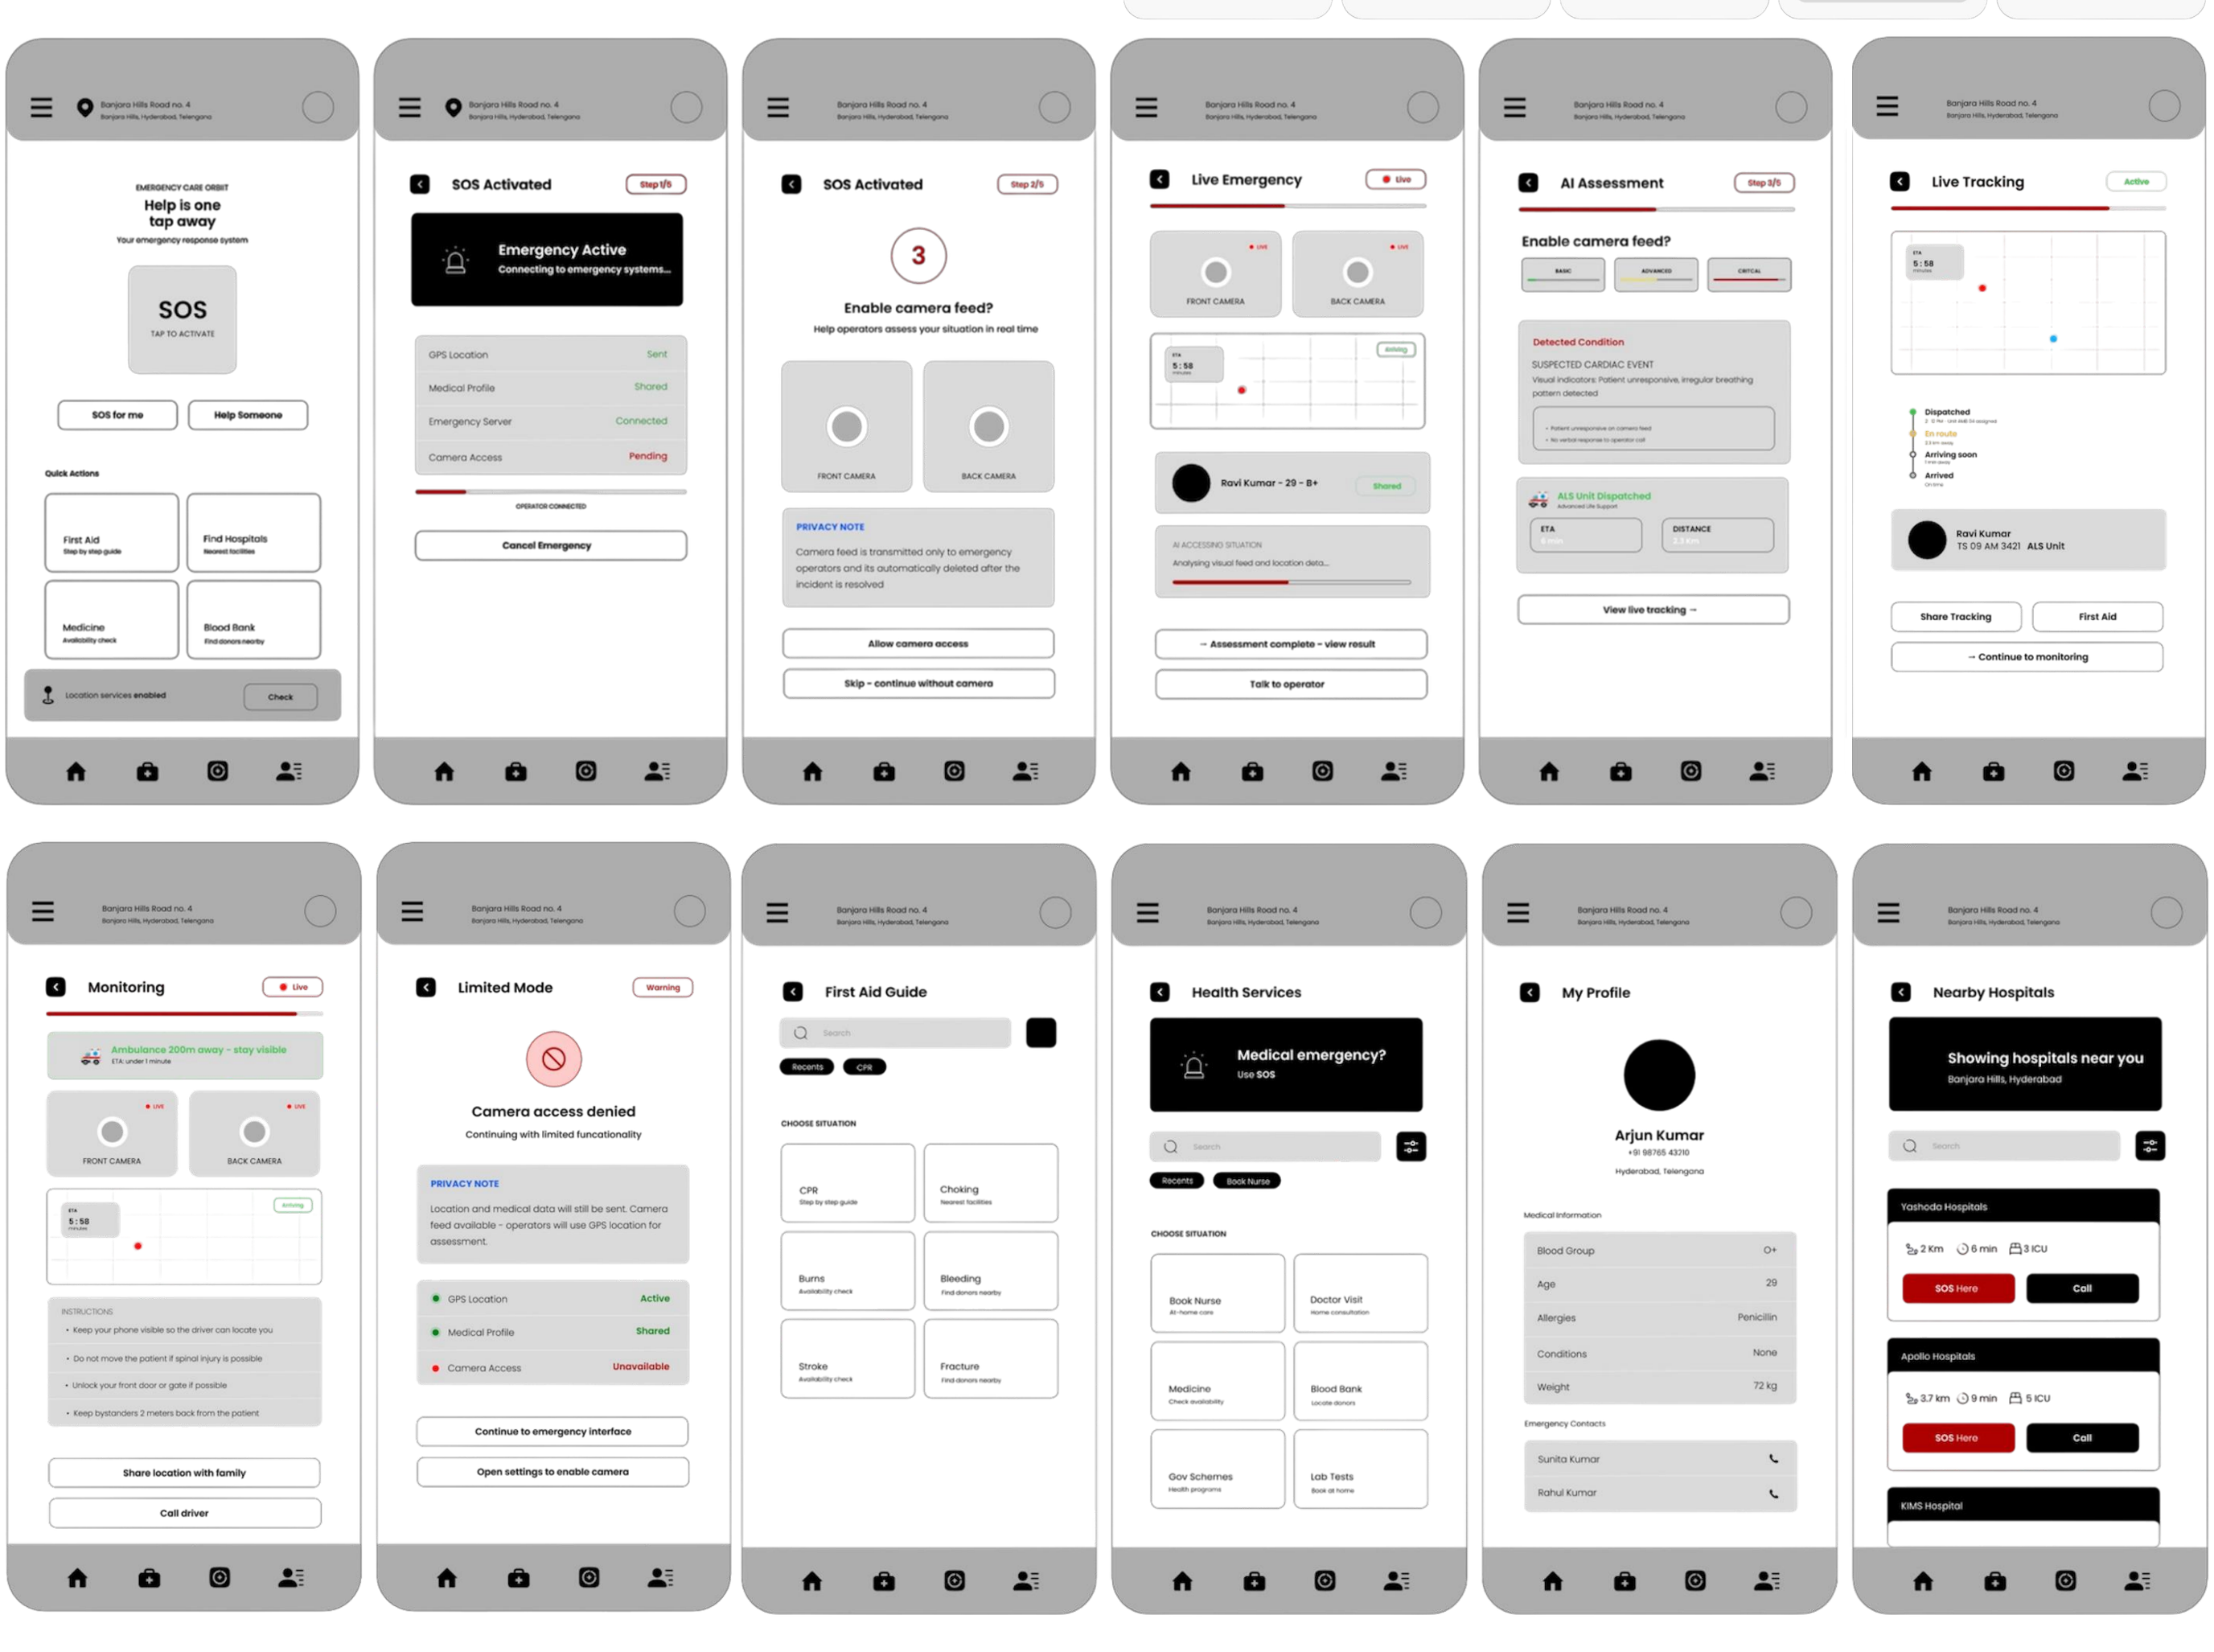
Ideation Sketches



Mid - Fidelity

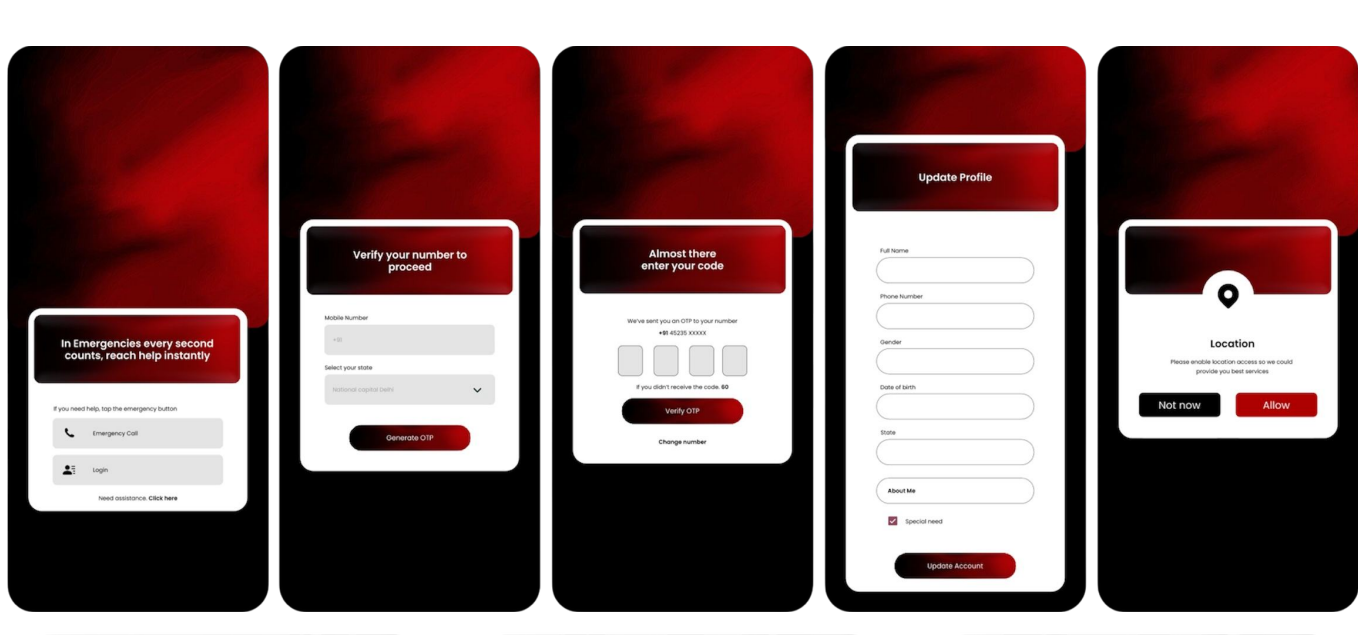
The mid-fidelity stage focused on structuring the user experience through clear layouts, navigation, and functionality for the ECO emergency response app. Wireframes were developed to test screen hierarchy, emergency access flow, and information placement while maintaining usability during high-pressure situations. Key interactions such as emergency contact access, SOS navigation, and service discovery were refined to ensure a seamless and intuitive experience. This phase helped evaluate user journeys, improve accessibility, and establish a functional foundation before moving into the final visual interface and interaction details.

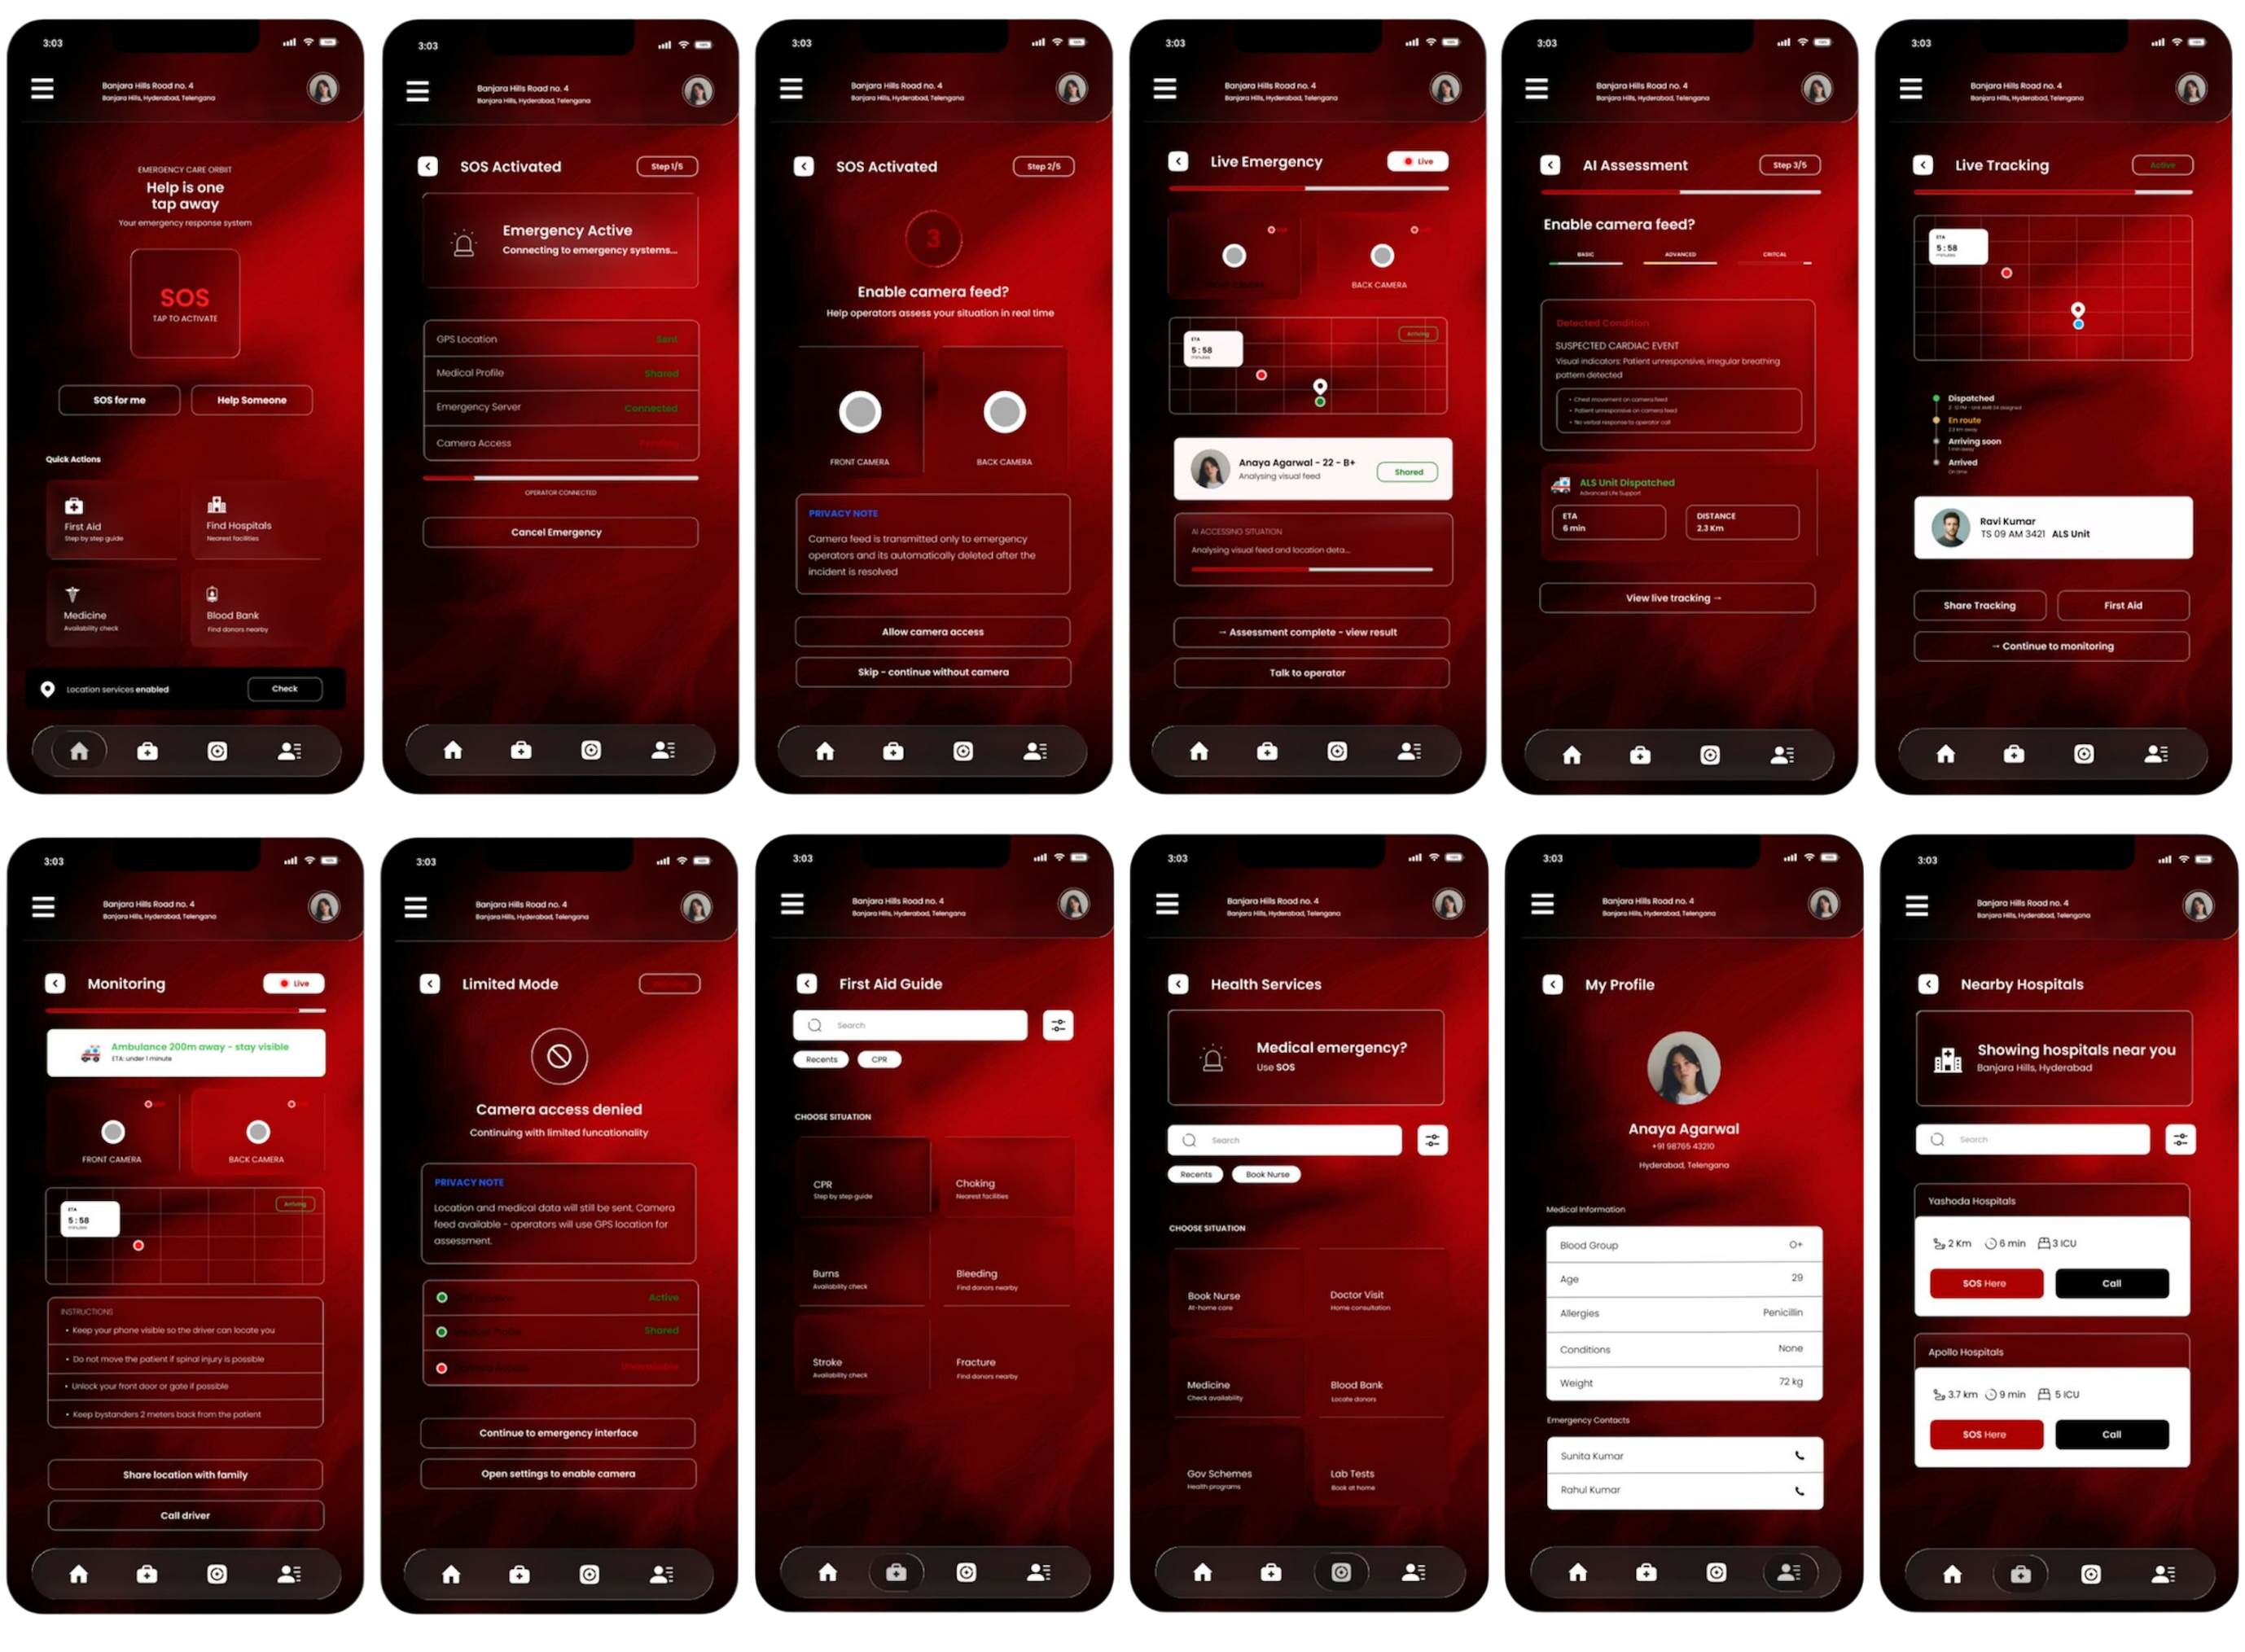




High - Fidelity

The high-fidelity stage transformed the wireframes into a polished and visually cohesive interface for the ECO emergency response app. A structured visual system, typography, color palette, and iconography were introduced to enhance clarity and trust during critical situations. Interactive elements were refined to improve accessibility, responsiveness, and user confidence while navigating emergency features. The final interface focused on delivering a seamless digital experience that balances functionality with clean aesthetics, ensuring users can quickly access support and essential services when needed.





Colors

A dark, high-contrast palette built around urgency, safety, and accessibility, using deep reds and neutral blacks to reflect emergency response.
